"One of the most interesting things about the Clearview solution is the extent to which Clearview leverages SharePoint Server and the Microsoft Office system – not just as a platform for delivering core ECM functionality – but also as part of the core user experience.

The integration of SharePoint Server and the Office system is pretty much seamless and delivers the power of both the SharePoint Server and Office system document management features in a very comprehensive, Microsoft-oriented user experience."

Ron Sielinski

Senior Product Manager
Microsoft Office Business Platform

WSN Clearview™ Document Capture Server (CVDCS) is integrated with Kofax Capture the global leader in document capture solutions. Our solution automates and accelerates business processes by capturing all types of paper and electronic documents and forms, transforming them into accurate and actionable information, and delivering it all into your core business applications (ECM, ERP, BPM, CRM), processes workflows and content repositories through the WSN Clearview Application Foundation Server. Whether your information is on paper or in electronic files, parked at a central office or scattered on desktops and remote offices throughout the world, the CVDCS can help you handle it all. Offering unmatched scalability, CVDCS is a powerful, enterprise ready, production level capture platform. It captures information from virtually any source: scanner, multi-function printer, print stream, email, fax, web service or folder.

EXTREME PERSONALIZATION FOR INCREASED EFFICIENCY

My File Cabinet and My Subscriptions are examples of personal user functionality that was designed to provide fast access to the files and content information workers use as a part of their daily work environment. No other system delivers this level of end-user functionality and personalized approach to content access and utilization.

INTELLIGENT ORGANIZATION, INTELLIGENT FOLDERS

iFolders provide an advanced organizational method within Clearview to uniquely store and arrange information, files, and documents the way you and your business work. No other system provides this level of information organizational intelligence.

ADVANCED DOCUMENT TRACKING SERVICES

The innovative design of Clearview provides a rich set of features to secure document accuracy, completeness of files, and appropriate filing location. Clearview provides the tools you need for a complete document and file tracking solution, including automated system reports and visual alerts for missing documents during file access.

SIMPLE, STREAMLINED SYSTEM ADMINISTRATION

Clearview has the most powerful and flexible System Manager module on the market. With optional Active Directory Integration, System Administrators have the option to maintain a single set of user profiles on their network or maintain individual organizational unit, group, and user records within Clearview.

Document and file administration are also managed in a way never before seen in legacy systems. The Clearview repair queue enables users to submit repair requests for changes and updates that need to be made to documents. Requests are then monitored and maintained by the appropriate document administration personnel.

ELIMINATE COMPLIANCE, AUDIT, AND EXAMINATION HEADACHES

The advanced audit and tracking capabilities in Clearview are designed for today's compliance and regulatory-sensitive business world. Every single system and user operation in Clearview can be audited—that's the Clearview difference.

Improves *any* Repository and
Works the way You Work!

WSN Clearview™ Document Capture Server

product datasheet

ADVANCED DOCUMENT IMAGING POWERED BY KOFAX®

Clearview and Kofax are tightly integrated to leverage the power of Kofax Capture for automated document recognition functionality including OCR, bar code, index validation, and other innovative input capabilities.

All document input is processed with high levels of automation assurance and quality control. Input is fully monitored and tracked by the system to ensure proper and accurate archival of critical business information without exception.

IFOLDERS (INTELLIGENT FOLDERS)

Viewed as a separate “content type” within Clearview, iFolders can contain multiple types of optional, required, or compliant content. As soon as a key piece of content is received by Clearview, the respective iFolder is automatically generated and maintains a list of content that is required to complete that folder. Content placed in an iFolder can be stored within any repository across the Clearview federated environment. iFolders provide a new method to intelligently and logically organize your business content.

ENCRYPTED CONTENT REPOSITORY

To deliver the maximum level of secured content within an organization, the optional Clearview Encryption module can be employed to securely encrypt each content object that is introduced and managed within the Clearview native repository.

MY FILE CABINET AND MY WORK FOLDERS

Provide information workers with a quick and easy way to access their allowed documents and files they need on a regular basis, through their very own, customizable, electronic file cabinet and corresponding work folders.

ONDEMAND AUDIT

Exceed audit and compliancy requirements with real-time audit reports targeting specific system operations, time spans, or user activity. Providing documented evidence of operational soundness to management, audit staff, or examiners has never been easier.

INNOVATIVE USER EXPERIENCE WITH CLEARVIEW CLIENT INTERFACES

Information workers can utilize the new, feature-rich Windows Clearview Client with an advanced ribbon interface similar to Microsoft Office, or utilize the Clearview Web client to access content and functionality in a highly intuitive thin client application.

Additionally, the optional Clearview IRISS desktop gadget provides the ultimate user experience with ease of use and personalization, content preview and the ability to scan directly to Clearview. No other ECM provider delivers a wide and varied selection of next-generation user interfaces designed to maximize information worker productivity.

Specifications

Operating System: Microsoft
Server 2008, 2012 (32/64 bit)

System RAM: 4 GB or more

System Processor:
Dual Core 1 GHz or Faster

Disk Storage: 1 GB or more

Requirements:
WSN Clearview™ Application Server
