

WSN Clearview™ Enterprise Report Manager

product datasheet

Clearview 2012 Highlights

Intelligent Indexing. Automatically insert index values based on key lookup values.

Index Value Validation. Data is accurate. Information worker confidence is boosted.

External Data Access. System Administrators can access index values from ODBC databases outside of Clearview, expanding the ECM reach throughout an organization.

Interactive with Documents Module. The Reports Module exists within the same interface as the Documents module, giving access to both documents and reports through a single search interface.

32-Bit and 64-Bit. Processing time is faster than ever.

“One of the most interesting things about the Clearview solution is the extent to which Clearview leverages SharePoint Server and the Microsoft Office system – not just as a platform for delivering core ECM functionality – but also as part of the core user experience.”

The integration of SharePoint Server and the Office system is pretty much seamless and delivers the power of both the SharePoint Server and Office system document management features in a very comprehensive, Microsoft-oriented user experience.”

Ron Sielinski
Senior Product Manager
Microsoft Office Business Platform

WSN Clearview Enterprise Report Manager captures, transforms and stores business content such as reports, statements, and invoices that are generated by your core business applications and turns them into a business intelligence dashboard. Enterprise report management (ERM) systems formerly called Computer Output to Laser Disc (COLD) provides capture, archive, store, and retrieve large-volume data such as accounting reports, loan records, inventories, shipping and receiving documents, and customer bills. WSN Clearview ERM replaces paper creation, microfiche solutions and routine tabular reports.

EXTREME PERSONALIZATION FOR INCREASED EFFICIENCY

With a wide range of intuitive report organization options, such as My File Cabinet, My Work Folders, and My Active Reports, information workers can interact with electronic report data the same way they would with their paper-based reports—but without the burden of manual filing and storing—thereby streamlining their daily activities and eliminating redundant tasks.

SIMPLE, STREAMLINED SYSTEM ADMINISTRATION

Clearview has the most powerful and flexible System Manager module on the market. With Active Directory Integration capability, System Administrators have the option to maintain a single set of user profiles on their network or maintain individual organizational unit, group, and user records within Clearview.

Simple drag-and-drop functionality, and the ability for new and existing information to be quickly added or modified, makes system administration updates and maintenance a breeze. Furthermore, system reporting, auditing, and usage tracking enable System Administrators to easily monitor for maintenance and security purposes.

ELIMINATE COMPLIANCE, AUDIT, AND EXAMINATION HEADACHES

The advanced audit and tracking capabilities in Clearview are designed for today's compliance and regulatory-sensitive business world. Every single system and user operation in Clearview can be audited—that's the Clearview difference.

UNPRECEDENTED REPORT CLASSIFICATION AND INDEXING

As your organization grows and evolves, so does the way you classify and index your reports. With years of Reports Management expertise, Clearview delivers the most advanced COLD solution available in today's market.

Leveraging XML and SQL Server, Clearview has the highest level of agility in how your reports are categorized and indexed. Unlike legacy systems, Clearview

product datasheet

MY ACTIVE REPORTS AND MY SUBSCRIPTIONS

Automatically present information workers with the reports they need on a daily basis, thereby eliminating repetitive and time-consuming searches. Optional email alerts can be issued when reports are ready to be viewed.

MY SAVED SEARCHES

Enables information workers to save their searches so they can quickly retrieve report data again and again. Either a list of the search results or the entire content can then be emailed, exported, or printed on demand.

MY FILE CABINET AND MY WORK FOLDERS

Provide information workers with a quick and easy way to access *allowed* reports and files they need on a regular basis, through their very own, customizable, electronic file cabinet and corresponding work folders.

RELATIONAL SEARCHES

By identifying the relationship between various index values, Clearview quickly locates reports that meet a diverse set of search criteria (for example, range of account balances and transaction types) from a single, simple search.

ONDEMAND AUDIT AND EXECUTIVE REPORT REVIEW

Exceed audit and compliancy requirements with real-time audit reports targeting specific system operations, time spans, or user activity. Furthermore, managers can use Clearview to review and sign off on required reports electronically and provide a history to auditors to eliminate paper waste and storage, and maintain high security standards.

ENCRYPTED CONTENT REPOSITORY

To deliver the maximum level of secured content within an organization, an optional encryption module can be employed to securely encrypt each content object introduced and managed in the Clearview native repository.

INNOVATIVE USER EXPERIENCE WITH CLEARVIEW CLIENT INTERFACES

Information workers can utilize the new, feature-rich Windows Clearview Client with an advanced ribbon interface similar to Microsoft Office, or utilize the newly designed Clearview Web Client to access content and functionality in a highly intuitive thin client application. Additionally, the optional Clearview IRISS desktop gadget provides the ultimate user experience with ease of use and personalization. No other ECM provider delivers a wide and varied selection of next-generation user interfaces designed to maximize information worker productivity.

Specifications

Operating System: Microsoft Windows Server 2008, 2012 (32/64 bit)

System Ram: 4 GB or more

System Processor:
Dual Core 1 GHz or Faster

Disk Storage: 1 GB or more

Requirements:
WSN Clearview™ ECM Application
Foundation Server
