

Improves *any* Repository and Works the way You Work!

product datasheet

## WSN Clearview™ Web / Thin Client

The WSN Clearview™ Web (or Thin) client application is the easiest and fastest way to connect your remote users to a robust Enterprise Content (Information) Management (ECM) solution. Like all of the WSN Clearview ECM Client applications the Web Client eliminates the traditional challenges associated with the high cost for desktop ECM or Thin client licenses, as well as the relative complexity associated with the training and daily usage for the casual user needing only basic content services.

The Thin Client has redefined the ECM landscape because it was specifically designed to overcome these issues and promote adoption of casual and power ECM users across the enterprise.

### Values and Benefits

- Interoperability with any content management system
- Work with content in SharePoint Sites, Libraries and Folders
- Support for most modern browsers
- User Satisfaction Guaranteed!

*“One of the most interesting things about the Clearview solution is the extent to which Clearview leverages SharePoint Server and the Microsoft Office system – not just as a platform for delivering core ECM functionality – but also as part of the core user experience.*

*The integration of SharePoint Server and the Office system is pretty much seamless and delivers the power of both the SharePoint Server and Office system document management features in a very comprehensive, Microsoft-oriented user experience.”*
