WSN Clearview™ for Microsoft SharePoint Server

While content storage is the foundation of ECM, there is much more to it. SharePoint requires the right combination of features and settings, and the proper planning to make it an ECM solution. Trying to use this collection of robust features as an application is not the right way to go. Of course, some ECM requirements are met with out-of-the-box SharePoint features, but there definitely are times when 3rd party add-ins like WSN Clearview™ for SharePoint and WSN Insight™ Knowledge Management for SharePoint are critical for unleashing SharePoint's full potential. With WSN Clearview for SharePoint benefit from a single, intuitive user experience to easily access and manage content across your entire SharePoint Farm. Easily integrate content from SharePoint with your line of business (LOB) applications. "SharePoint might appear like a cheap-and-cheery ECM alternative. Unfortunately, without commitment and investment, the initiative often has poor user adoption and dies. Most enterprises struggle with implementing SharePoint as an ECM. It is simply difficult and surprisingly expensive to implement." WSN Clearview is your solution for unleashing the potential of SharePoint as an ECM.

Values and Benefits

- Eliminate SharePoint Findability Issues
- Capture and Scan Directly to SharePoint
- Integrate LOB Content with SharePoint
- Provides Document Imaging for SharePoint

"One of the most interesting things about the Clearview solution is the extent to which Clearview leverages SharePoint Server and the Microsoft Office system – not just as a platform for delivering core ECM functionality – but also as part of the core user experience.

The integration of SharePoint Server and the Office system is pretty much seamless and delivers the power of both the SharePoint Server and Office system document management features in a very comprehensive, Microsoft-oriented user experience."

Ron Sielinski

Senior Product Manager—Microsoft Office Business Platform

Specifications

Operating System:
Microsoft Server 2008, 2012 (32/64 bit)

System RAM: 4 GB or more *All-in-one installations with SharePoint and SQL Server shall require additional RAM

System Processor:
Dual Core 1 GHz or faster

Disk Storage: 1 GB or more

Requirements: WSN Clearview
Application Foundation Server
Microsoft SharePoint Server 2010 or 2013 Standard or Enterprise Edition
